

2012 Purdue Crop Cost & Return Guide

January 2012 Estimates

Both product prices and input prices may have significantly changed since these estimates were prepared.

Table 1. Estimated per Acre Crop Budgets for Low, Average, and High Productivity Indiana Soils

	Crop Budgets for Three Yield Levels ¹														
	Low Productivity Soil					Average Productivity Soil					High Productivity Soil				
	Cont. Corn	Rot. Corn	Rot. Beans	Wheat	DC Beans	Cont. Corn	Rot. Corn	Rot. Beans	Wheat	DC Beans	Cont. Corn	Rot. Corn	Rot. Beans	Wheat	DC Beans
Expected yield per acre ²	122	130	43	56	30	153	163	54	70	38	184	196	65	84	46
Harvest price ³	\$5.60	\$5.60	\$11.90	\$6.40	\$11.90	\$5.60	\$5.60	\$11.90	\$6.40	\$11.90	\$5.60	\$5.60	\$11.90	\$6.40	\$11.90
Market revenue	\$683	\$728	\$512	\$358	\$357	\$857	\$913	\$643	\$448	\$452	\$1,030	\$1,098	\$774	\$538	\$547
Less variable costs ⁴															
Fertilizer ⁵	\$182	\$162	\$68	\$79	\$51	\$194	\$175	\$83	\$104	\$62	\$207	\$189	\$98	\$129	\$72
Seed ⁶	87	87	62	41	72	107	107	62	41	72	107	107	62	41	72
Pesticides ⁷	38	38	29	8	26	38	38	29	8	26	38	38	29	8	26
Dryer fuel ⁸	32	26	N/A	N/A	3	40	32	N/A	N/A	4	49	39	N/A	N/A	5
Machinery fuel @ \$3.60	27	27	16	16	12	27	27	16	16	12	27	27	16	16	12
Machinery repairs ⁹	21	21	18	18	15	21	21	18	18	15	21	21	18	18	15
Hauling ¹⁰	11	12	4	5	3	14	15	5	6	4	17	18	6	8	4
Interest ¹¹	12	12	7	5	6	13	13	7	6	6	7	7	8	7	7
Insurance/misc. ¹²	32	33	23	3	4	32	33	23	3	4	32	33	23	3	4
Total variable cost	\$442	\$418	\$227	\$175	\$192	\$486	\$461	\$243	\$202	\$205	\$505	\$479	\$260	\$230	\$217
Contribution margin ¹³ (Revenue - variable costs) per acre	\$241	\$310	\$285	\$183	\$165	\$371	\$452	\$400	\$246	\$247	\$525	\$619	\$514	\$308	\$330

¹Estimated yields and costs are for yields with average management for three different soils representing low, average, and high productivity. The high productivity soils represent soils capable of producing corn and soybeans with yields about 20% higher than average soils. Low productivity soils represent soils capable of producing corn and soybeans with yields about 20% lower than the average soils.

²These yields assume average weather conditions and timely plant/harvest date, except soybean double-crop yield, which is based on a July 1 planting date. Continuous corn, full-season soybean, and wheat yields are a percent of rotation corn yield: continuous corn 94%; rotation soybeans 33%; and wheat 43%. Double-crop soybean yields are 70% of full-season soybean yields. Continuous corn yields assume a chisel plow tillage system. Double-crop soybean yields apply to central and southern Indiana. Rotation corn yields for average soils are based on the 20 year trend in state average yields reported by the Indiana office of the National Agricultural Statistics Service.

³Harvest corn price is December 2012 CME Group futures price less \$0.25 basis. Harvest soybean price is November 2012 CME Group futures price less \$0.35 basis. Harvest wheat price is July 2012 CME Group futures price less \$.35 basis. Harvest prices were based on closing prices on January 9, 2012. These prices will change.

Table 1 (Continued)

⁴Input prices for variable costs reflect expected prices for 2012. These prices will vary by location and time of the year. Users need to adjust these prices to reflect their own expectations and price situation.

⁵Phosphate, potash, and lime applications are based on Tri-State Fertilizer Recommendations (Source: Michigan Extension Bulletin E-2567, July 1995). Lime amounts represent the pounds of standard ag lime needed to neutralize the acidity from the nitrogen supplied from sources other than ammonium sulfate. Nitrogen application rate for corn is based on research from the Department of Agronomy, Purdue University. Anhydrous ammonia is used as the nitrogen source for corn. Urea is used as the nitrogen source for wheat. Pounds of N, P₂O₅, K₂O, and lime by crop and soil were as follows: continuous corn, 220-45-53-660, 220-56-61-660, 220-67-69-660; rotation corn, 180-48-55-540, 180-60-63-540, 180-71-72-540; rotation beans, 0-34-80-0, 0-43-96-0, 0-52-111-0; wheat, 58-38-42-172, 84-47-48-251, 110-57-53-330; double crop beans, 0-24-62-0, 0-30-73-0, 0-37-84-0. Fertilizer prices per lb.: NH₃ @ \$0.54; urea @ \$0.62; P₂O₅ @ \$0.66; K₂O @ \$0.57; lime @ \$19.00/ton spread on the field. 5-10% more nitrogen might be needed on poorly drained soils. All soil tests for phosphorus and potassium are assumed to be in the maintenance range, and the pH is in the recommended range. The economically optimal nitrogen rate for corn has been increased in this estimate relative to the 2011 crop costs and returns (published in January 2011).

⁶Corn seed prices assume a biotech variety with multiple traits. A 20%-refuge is planted with varieties that do not contain insect resistant traits, but do include herbicide tolerance. According to the USDA's Agricultural Prices report for April 2010, biotech corn seed prices averaged 54% more than non-biotech corn seed, which was down from 69% more a year earlier. Seeding rates for corn are 27,000 seeds per acre on low productivity soils and 33,000 seeds per acre on average and high productivity soils. Soybean seed prices include Round-Up Ready® varieties. Rotation soybeans are drilled with a seeding rate of 169,000 seeds per acre with a 90% germination rate. Double-crop soybeans are drilled with a seeding rate of 195,000 seeds per acre. The seeding rate for wheat is two bushels per acre.

⁷Includes insecticides and herbicides. For corn, rootworm insecticide is applied to the refuge acres. In some areas of Indiana, this may not be required. These costs do not include the application of fungicide to corn. If fungicide is applied, this will add an additional \$28 to \$32 per acre for material and application. Pesticide costs can vary widely based on herbicides selected, required rate of application, and product pricing.

⁸Fuel used to dry crop to a safe moisture level for storage. For double-crop soybeans, the drying charge represents the drying of wheat in order to allow an earlier planting of soybeans.

⁹Repairs are based on approximately 5-year-old machinery. For older machinery, per acre repairs and downtime cost will be higher.

¹⁰Hauling charge represents moving grain from field to storage. (Based on Machinery Cost Estimates: Harvesting, University of Illinois, Farm Business Management Handbook, April 2010.)

¹¹Interest is based on 6% annual rate for 9 months for seed, fertilizer, and chemicals, and for 6 months for half the machinery fuel and repairs, and all miscellaneous expenses.

¹²The cost of crop insurance represents the premium estimated for a Revenue Coverage (RP) policy at the 75% level. Since rates for the 2012 crop year are not available, estimates were based on rates in 2011. These revenue insurance rates contain a base price of \$6.01 per bushel for corn and \$13.49 per bushel for soybeans, which were the base prices for the 2011 crops. Per acre rates will change based on the price guarantees, volatility parameters, and level of protection selected for the 2012 crop year. Crop insurance is included in budgets for corn and full-season soybeans, but is not included for wheat and double-crop soybeans. Revenue Protection coverage was new for 2011.

¹³Contribution margin is the return to labor and management, machinery services, land resources, and risk.

Table 2. Estimated per Acre Government Payments, Overhead Costs & Earnings for Low, Average, and High Productivity Indiana Soils

Farm Acres Rotation ¹	Low Productivity Soil				Average Productivity Soil				High Productivity Soil			
	900 c-c	1000 c-b	2700 c-c	3000 c-b	900 c-c	1000 c-b	2700 c-c	3000 c-b	900 c-c	1000 c-b	2700 c-c	3000 c-b
Crop contribution margin ²	\$241	\$298	\$241	\$298	\$371	\$426	\$371	\$426	\$525	\$567	\$525	\$567
Government payment ³	\$17	\$17	\$17	\$17	\$20	\$20	\$20	\$20	\$25	\$25	\$25	\$25
Total contribution margin	\$258	\$315	\$258	\$315	\$391	\$446	\$391	\$446	\$550	\$592	\$550	\$592
Annual overhead costs:												
Machinery ownership ⁴	\$111	\$96	\$91	\$77	\$118	\$102	\$96	\$82	\$121	\$104	\$98	\$84
Family and hired labor ⁵	\$74	\$65	\$50	\$45	\$74	\$65	\$50	\$45	\$74	\$65	\$50	\$45
Land ⁶	\$146	\$146	\$146	\$146	\$189	\$189	\$189	\$189	\$239	\$239	\$239	\$239
Earnings or (losses)	-\$73	\$8	-\$29	\$47	\$10	\$90	\$55	\$130	\$116	\$184	\$162	\$224

¹Rotations are as follows: c-c = all of the farm acres in continuous corn; c-b = one-half of the farm acres in rotation corn and one-half in rotation soybeans.

²Crop's contribution margin is the per acre contribution margin from Table 1.

³Government payment includes only the direct payment with no participation in ACRE. The per bushel direct payment rate is \$0.28 for corn and \$0.44 for soybeans. These are the payment rates for 2012. Direct payment yields for corn were 94.5, 110.5, 136.6 on low, average, and high soils. Direct payment yields for soybeans were 31.7, 37.0, and 45.8 for low, average, and high soils. Base acres for the farm are assumed half corn and half soybeans. Federal regulations pertaining to payment limits may limit this payment to a smaller amount than is shown here. If a producer participates in the ACRE program, direct payment rates are reduced 20%. The decision about participating in the ACRE program will likely need to be made by June 1, 2012. An advantage of participating in ACRE is the possibility of receiving a more stable revenue for corn, soybeans, and wheat if crop prices decline. As grain prices decline, both the possibility of a payment and the size of the payment increases. Producers will need to review their revenue estimates for the state and their farms as the ACRE signup deadline approaches. Tools that can be used to estimate the potential payments from ACRE can be found at <http://www.ag.purdue.edu/agecon/Pages/agpolicy.aspx>.

⁴The same basic machinery set, which is timely for each rotation, is used for both the c-c and c-b rotation. The larger farm size requires larger, more expensive machinery. Corn production utilizes a chisel plow tillage system, and soybeans utilize no-till. Average annual replacement costs for the larger farm size were calculated using the Purdue Machinery Cost Calculator for a timely machinery set. Seven-year trading policy is assumed for combine and planter, 10-year policy for other field machinery. On livestock farms where fewer hours each day are available for crops, or on small farms, machinery costs and/or labor costs will be higher. On well-drained soils where more days are suitable for spring field work, machinery costs could be lower. The machinery costs for the smaller farm size were estimated using a machinery complement and cost estimates adapted from budgets published by The Ohio State University. A 10-year trading policy was assumed for all machinery on the smaller acreages. Machinery ownership costs are likely to vary widely from farm to farm.

⁵For the larger acreages, labor expense includes a family living withdrawal of \$58,297 (\$74,209 of family living expenses less \$35,976 in net nonfarm income plus \$20,064 in income and self-employment taxes) and a full-time employee with total compensation of \$41,612. The balance is used for part-time hired labor. Family living withdrawal is from Farm Income & Production Costs for 2010, University of Illinois Extension, AE-4566, April 2011. Employee compensation is based on Wages and Benefits for Farm Employees, Iowa State University, University Extension FM 1862, July 2006 and adjusted for increases in wage rates. For the smaller acreages, labor expense includes the same operator costs plus part-time employee(s). The c-c rotation requires more total labor. Labor costs are likely to vary widely from farm to farm.

⁶Based on 2011 cash rent per bushel of corn yield reported in the article entitled "Indiana Farmland Market Continues to Sizzle," Purdue Agricultural Economics Report, August, 2011. The relatively large estimated contribution margins for 2012 will likely place upward pressure on 2012 cash rents.

Prepared by: Craig L. Dobbins and W. Alan Miller, Department of Agricultural Economics; Bob Nielsen, Tony J. Vyn, and Shaun Casteel, Department of Agronomy; Bill Johnson and Kiersten Wise, Department of Botany and Plant Pathology, Purdue University; and Bruce Erickson, Agronomic Education Manager, American Society of Agronomy and Adjunct Assistant Professor, Department of Agronomy, Purdue University.

Date: 01/16/2012

It is the policy of the Purdue University Cooperative Extension Service that all persons have equal opportunity and access to its educational programs, services, activities, and facilities without regard to race, religion, color, sex, age, national origin or ancestry, marital status, parental status, sexual orientation, disability or status as a veteran. Purdue University is an Affirmative Action institution.
